

ABSTRACT

A thread-connected RCA connector comprises a connector and a cover. One end of the connector is threaded and is screwed to a video coaxial cable; and another end of the connector has a protruded annular wall. A center of
5 the annular wall is protruded with a metal lead. A signal wire is connected to the metal lead. One end the signal wire passes through one through hole of the annular wall and another end of the signal wire is connected to a built-in video card; and a cover covers the annular wall. A lateral side of the cover has an opening so that the signal wire passes through the opening.
